

I fully support the filing of the ARRL with regard to BPL. The FCC must insure that any modification of Part 15 radiation levels for BPL are not a source of interference to vital emergency communications provided by licensed amateur radio operators or military affiliate radio system operators. My observations have been that any significant radiation at the currently allowed Part 15 levels can cause significant interference at the radiated frequency. These BPL systems are designed to operate over the range of frequencies from vlf through low vhf. This operation would effectively render the entire radio spectrum utilised for worldwide communication unusable. Please stop this BPL foolishness before the HF spectrum is polluted with unwanted radiation.
